

# Management of Postpartum Hypertension/Preeclampsia

**Sarosh Rana MD, MPH**

Professor and Section Chief  
Maternal Fetal Medicine  
Obstetrics and Gynecology

Alaska AIM Learning session  
02/20/2020

A close-up photograph of a pregnant woman's bare belly. Two hands are gently touching the abdomen, one near the top and one near the bottom. The lighting is soft and warm, highlighting the texture of the skin.

# STAMPP-htn

Systematic Treatment And Management of  
PostPartum *hypertension*

*Clinical guidelines and protocols*

Hospital level initiatives for management of postpartum hypertension

Funding : Department of OB/GYN, CLI Board, Women's Board, Omron

# POINTS TO DISCUSS

- What is preeclampsia
  - Why is it important to worry about preeclampsia
  - Why worry about BP after delivery
  - What are some local measures one can take to identify preeclampsia to mitigate risk to mothers and babies
-

# PREECLAMPSIA

- Common hypertensive disorder of pregnancy
  - 5-7 % of pregnancies
  - 70,000 maternal deaths and 500,000 fetal deaths/year worldwide
  - Associated with long term cardiac and renal complications
    - HTN, CVD risk, stroke, dementia and death
    - Lack of physician awareness
      - 56% of internists and 23% of ob-gyns were unsure or did not know whether preeclampsia is associated with ischemic heart disease
      - Only 9% of internists counseled women who had preeclampsia about cardiovascular risk reduction
  - AA women 3-4 times at higher risk of dying from pregnancy related complications and preeclampsia a common cause of serious maternal morbidity and death
-

# Maternal Mortality Is Rising in the U.S. As It Declines Elsewhere

Deaths per 100,000 live births

# IMMEDIATE COMPLICATIONS OF PREECLAMPSIA

- Placental abruption
  - HELLP syndrome
  - Eclampsia
  - Liver and kidney damage
  - Fetal growth restriction
  - Preterm birth
  - Cardiomyopathy
  - Maternal /fetal death
-

# LONG TERM RISKS OF PREECLAMPISA

- Increased risk of cardiovascular disease (CVD) such as hypertension, myocardial infarction and congestive heart failure, cerebrovascular event (stroke), peripheral arterial disease and cardiovascular mortality later in life
- Women with a hypertensive disorder of pregnancy have 12- to 25-fold higher rates of hypertension than women with a normotensive pregnancy in the year after delivery
- Increased risk of end stage renal disease, stroke and dementia
- Lack of physician awareness
  - 56% of internists and 23% of ob-gyns were unsure or did not know whether preeclampsia is associated with ischemic heart disease
  - only 9% of internists counseled women who had preeclampsia about cardiovascular risk reduction

# LIFE SAVING INTERVENTIONS

- What can you do at your hospital level

# Our hospital journey

- Participate in ILPQC- treatment of acute severe HTN , huddle and discharge instructions
  - STAMPP- HTN- **S**ystematic **T**reatment **A**nd **M**anagement of **P**ost**P**artum *hypertension*
  - **>85% of patients are AA and majority are obese**
-

# Illinois Perinatal Quality Collaborative (ILPQC):

Severe Hypertension in Pregnancy  
and Improving Time to Treatment

---

# Goals of the Program

- Improve the timely delivery of antihypertensive therapy for severely elevated blood pressures
  - Document potential barriers to care
  - Develop potential strategies to improve delivery and quality of care
  - Allows for individual hospital and statewide assessment
-

# What is the program?

- Timely administration of IV anti hypertensives for severe range blood pressures in pregnancy
    - Defined as: SBP > 160 or DBP > 110
    - Within 1 hour of identification
      - The sooner the better ( within 30 minutes)
  - Standardized form outlining recognition and delivery of care
    - Process and timing of initial delivery of care
    - Debriefing process for barriers to care
    - Additional complications and issues encountered during an admission
    - Discharge planning and follow-up
-

# Potential for intervention

- Prior CMQCC Analysis
  - 60% of maternal deaths from preeclampsia had “good to strong chance” of altering outcomes with intervention
  - In cases of maternal mortality:
    - Delayed response to warning signs in 90%
    - Ineffective care in 70%
    - Misdiagnosed in 40%

# Severe Maternal Morbidity

- Severe maternal morbidity more frequent in women with severe HTN compared to non-severe HTN
- Frequency of severe morbidity did NOT increase with worsening BP values
  - Suggests that once severe range BPs occur, they require intervention
- Higher rates of maternal morbidity seen with:
  - Lower hospital NICU care levels (Level 3 vs Level 4)
  - Lower delivery volumes (Low vs High)

# Call to Action

- ACOG has developed Safety Bundles for Severe Hypertension in Pregnancy
    - Risk Assessment and Prevention
      - Diagnostic Criteria
      - When to Treat
      - Agents to Use
      - Monitoring
    - Readiness and Response
      - Complications and escalation process
      - Further evaluation
      - Change of status
      - Postpartum surveillance
  - Bundle
    - A way to describe a collection of processes needed to effectively care for patients undergoing particular treatments with inherent risks
-

# Recognition of Hypertensive emergency

- Measurement of severe hypertension with the patient in either the seated upright position
    - SBP > 160
    - DBP > 110
  - Persistent > 15 min from initial measurement
  - Recognized as occurring:
    - Antepartum
    - Intrapartum
    - Postpartum
-

# Antihypertensive Agents

- Intravenous medications preferable
    - Labetalol
    - Hydralazine
  - Nifedipine (short-acting) has shown effectiveness as an oral agent
    - Less experience with the medication
  - Magnesium sulfate and epidurals are NOT considered antihypertensive agents
-

# Discharge and Follow Up

- Discharge instructions
    - Should include review of warning signs and symptoms for severe manifestations of hypertension in pregnancy
  - When planning discharge for hypertensive patient
    - Within 3-7 days if discharged without medication
    - < 72 hours if discharged with medication
-

## SEVERE HYPERTENSION DATA FORM

**Topic:** Maternity service team review and document sequence of events, successes with and barriers to swift and coordinated response to preeclampsia with severe features.

**Goal:** Reduce time to treatment (< 60 minutes) for new onset severe hypertension ( $\geq 160$  systolic OR  $\geq 110$  diastolic) with preeclampsia or eclampsia or chronic/gestational hypertension with superimposed preeclampsia (include patients from triage, L&D, Antepartum, PP, ED) in order to reduce preeclampsia morbidity in Illinois.

**Instructions:** Complete within 24 hrs. after all cases of new onset severe hypertension ( $\geq 160$  systolic or  $\geq 110$  diastolic) event in pregnancy up to 6 wks postpartum. Debrief should include primary RN and primary MD to identify opportunities for improvement in identification and time to treatment of HTN.

**Date:** \_\_\_\_\_ **GA at Event (weeks & days) OR # Days PP:** \_\_\_\_\_

**Patient Location (check all that apply)** ☐ Triage ☐ L&D ☐ Postpartum  
☐ Antepartum ☐ ED

**Maternal Age:** \_\_\_\_\_ **Height:** \_\_\_\_\_ **Current Weight:** \_\_\_\_\_

**Diagnosis:** ☐ Chronic HTN ☐ Gestational HTN ☐ Preeclampsia

☐ Superimposed Preeclampsia ☐ Postpartum Preeclampsia ☐ Other \_\_\_\_\_

### PROCESS MEASURE (P1): Medical Management

Time: hh:mm	Measure
	BP reached $\geq 160$ or diastolic $\geq 110$ (sustained >15 min)
	First BP med given
	BP reached <160 and diastolic BP <110

### Medications (check all given)

Medications	Dosage(s) given	Reason not given
<input type="checkbox"/> Labetalol		
<input type="checkbox"/> Hydralazine		
<input type="checkbox"/> Nifedipine		
Magnesium Sulfate Bolus	<input type="checkbox"/> 4gm <input type="checkbox"/> 6gm <input type="checkbox"/> Other	
Magnesium Sulfate Maintenance	<input type="checkbox"/> 1gm/hr <input type="checkbox"/> 2gm/hr <input type="checkbox"/> 3gm/hr <input type="checkbox"/> Other	
Any ANS (if <34 wks)?	<input type="checkbox"/> Partial Course <input type="checkbox"/> Complete Course <input type="checkbox"/> Not Given	

### BALANCING MEASURE (B1,B2): Monitor Medical Management

**B1.** Did diastolic pressure fall to <80 within one hour after meds given?

☐ YES ☐ NO

**B2.** If yes, was there corresponding deterioration in FH rate (Category 3)?

☐ YES ☐ NO

### OB Complications (check all that apply)

Transport In? ☐ YES ☐ NO Date: \_\_\_\_\_

**GA at Delivery (weeks & days):** \_\_\_\_\_ Transport Out? ☐ YES ☐ NO Date: \_\_\_\_\_

**Adverse Maternal Outcome:** \_\_\_\_\_ **Date:** \_\_\_\_\_

☐ OB Hemorrhage with transfusion of  $\geq 4$  units of blood products

☐ Intracranial Hemorrhage or Ischemic event

☐ Pulmonary Edema ☐ ICU admission ☐ HELLP Syndrome

☐ Oliguria ☐ Eclampsia ☐ DIC

☐ Renal failure ☐ Liver failure ☐ Ventilation

☐ Placental Abruption ☐ Other \_\_\_\_\_ ☐ None

**Adverse Neonatal Outcome:** \_\_\_\_\_ **Date:** \_\_\_\_\_

☐ NICU/SCN admission ☐ IUFD ☐ Other \_\_\_\_\_ ☐ None

### Maternal Race/Ethnicity (check all that apply):

☐ White ☐ Black ☐ Hispanic ☐ Asian ☐ Other

### PROCESS MEASURE (P2) Discharge Management

**A. Discharge Education:** Education materials about preeclampsia given?

☐ YES ☐ NO

**B. Discharge Management:** Follow-up appt scheduled within 3-10 days

(for all women with any severe range hypertension/preeclampsia)

☐ YES ☐ NO

Was patient discharged on meds?

☐ YES ☐ NO

**If YES:** Was follow up appointment scheduled in <72 hours?

☐ YES ☐ NO

**COMMENTS about Medical Management, Monitoring, Discharge**

**Opportunities for improvement to reduce time to treatment (identification severe HTN to treatment goal <60 minutes): De-brief**

**Debrief Participants:** Primary MD: ☐ YES ☐ NO Primary RN: ☐ YES ☐ NO

TEAM ISSUES	Went well	Needs improvement	Comment

Any other issues:			

Death can happen up to a year after delivery.

CDC 2019

# PROBLEMS AT THE LEVEL OF THE HOSPITAL

## ➤ At the time of admission and discharge

- General lack of knowledge among patients about long term effects of preeclampsia
- No organized effort for education to patients
- Discharge instructions not universally given
- No dedicated postpartum clinic for easy access to care

## ➤ Problems with readmissions in ED

- Identifying post partum patients
- Incorrect Treatment of PP HTN
- Poor knowledge about definition of severe for PPHTN
- Calling medicine or cardiology instead of OB
- Delayed transfer to L/D
- Delay in recognition and treatment of severe PPHTN

## ➤ No standardized management for readmissions for PPHTN

## POSTPARTUM PREECLAMPSIA CARE

### TAKING YOUR BLOOD PRESSURE AT HOME

- 1. Rest in a chair at least 5 minutes before taking blood pressure
- 2. Make sure you are relaxed, still, and don't talk
- 3. Your legs should be uncrossed and feet flat on the floor
- 4. Do not smoke, exercise, drink caffeine or alcohol 30 min before taking blood pressure
- 5. Take at least 2 readings a day: One in the morning before taking your medication and one in the evening. Record all results.
- 6. Take your blood pressure monitor with you to your 1 week clinic appointment. The provider will review your stored blood pressure in your blood pressure monitor.

### IMPORTANT INFORMATION:

- ☐ My 1 week preeclampsia follow-up appointment is on \_\_\_\_\_
- ☐ Blood pressure medications prescribed: \_\_\_\_\_
- ☐ How to get help
  - ☐ For medical emergencies call 911
  - ☐ If your blood pressure is 160 or greater systolic (top number)/110 or greater diastolic bottom number, go to the emergency room for evaluation.
  - ☐ For Postpartum hypertension clinic call 773-702-6118

**Know Preeclampsia Symptoms**

- Headache that won't go away
- Visual disturbances (seeing spots or auras)
- Epigastric pain (upper right quadrant)
- Sudden weight gain
- Breathlessness (difficulty breathing)
- Swelling of the face, legs, or hands
- "Just not feeling right", unexplained "anxiety"

**KNOW YOUR RISKS**

SEIZURES  
ORGAN DAMAGE  
DEATH

**MONITOR YOUR BLOOD PRESSURE AT HOME**

**TAKE YOUR MEDICATIONS**

**"GET FOLLOW-UP CARE"**

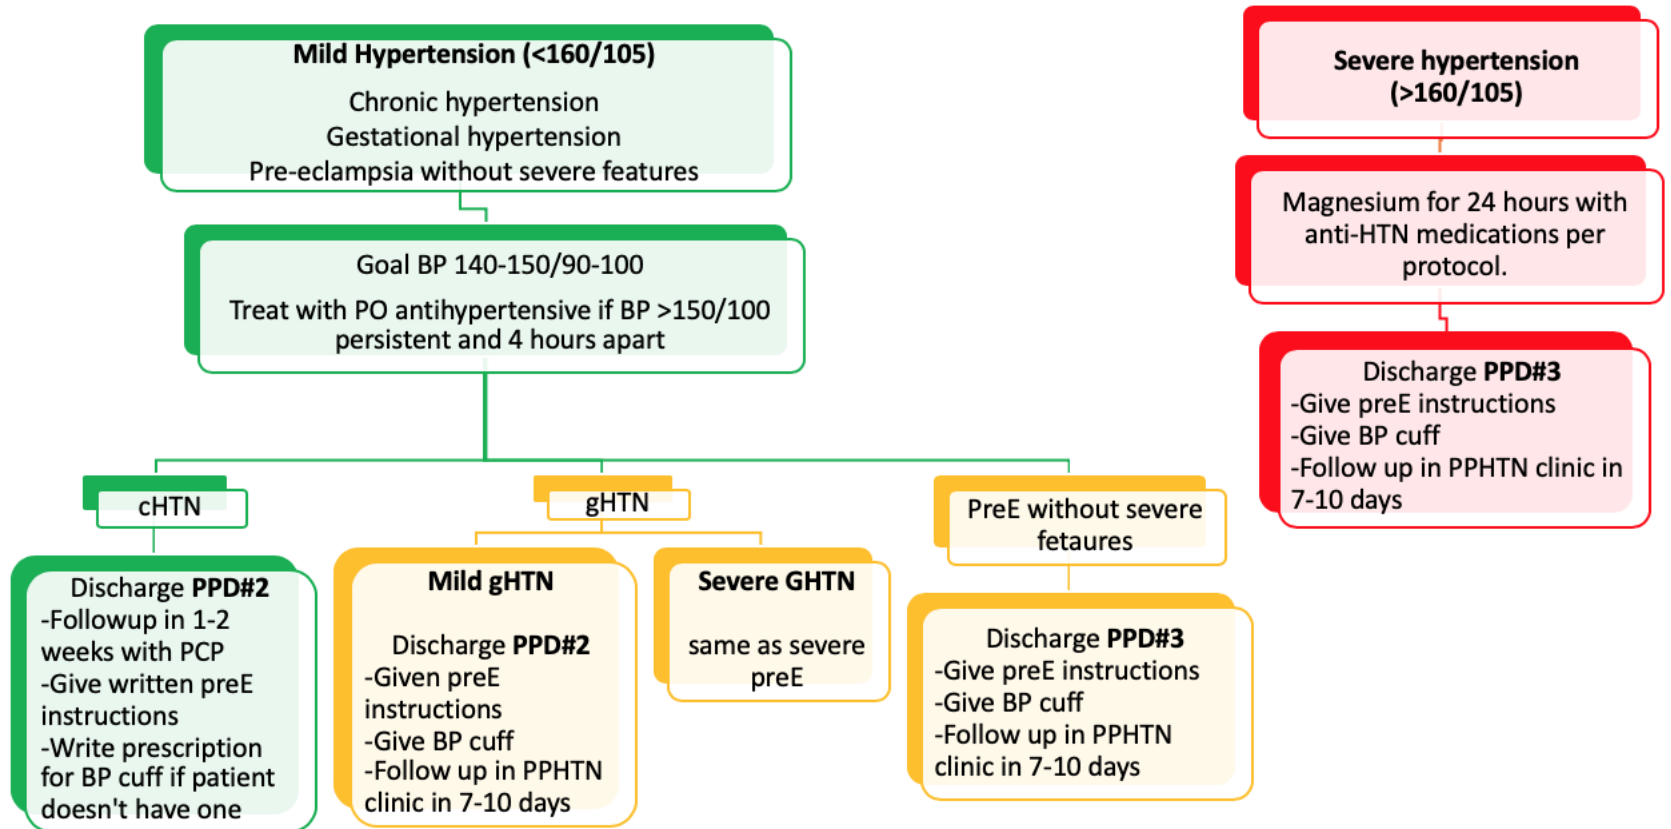

# **STANDARDIZED PROTOCOLS FOR MANAGEMENT OF PPHTN**

# PPHTN clinics

- Follow up in PPHTN clinic
    - Appointments before discharge
    - Standardized Protocol for treatment of HTN
    - Patient to be sent to L/d for severe HTN
    - Long term follow up with cardiology
-

# Management of BP's postpartum and discharge after delivery- IMMEDIATE PP

## ALL patients with gHTN or PreE

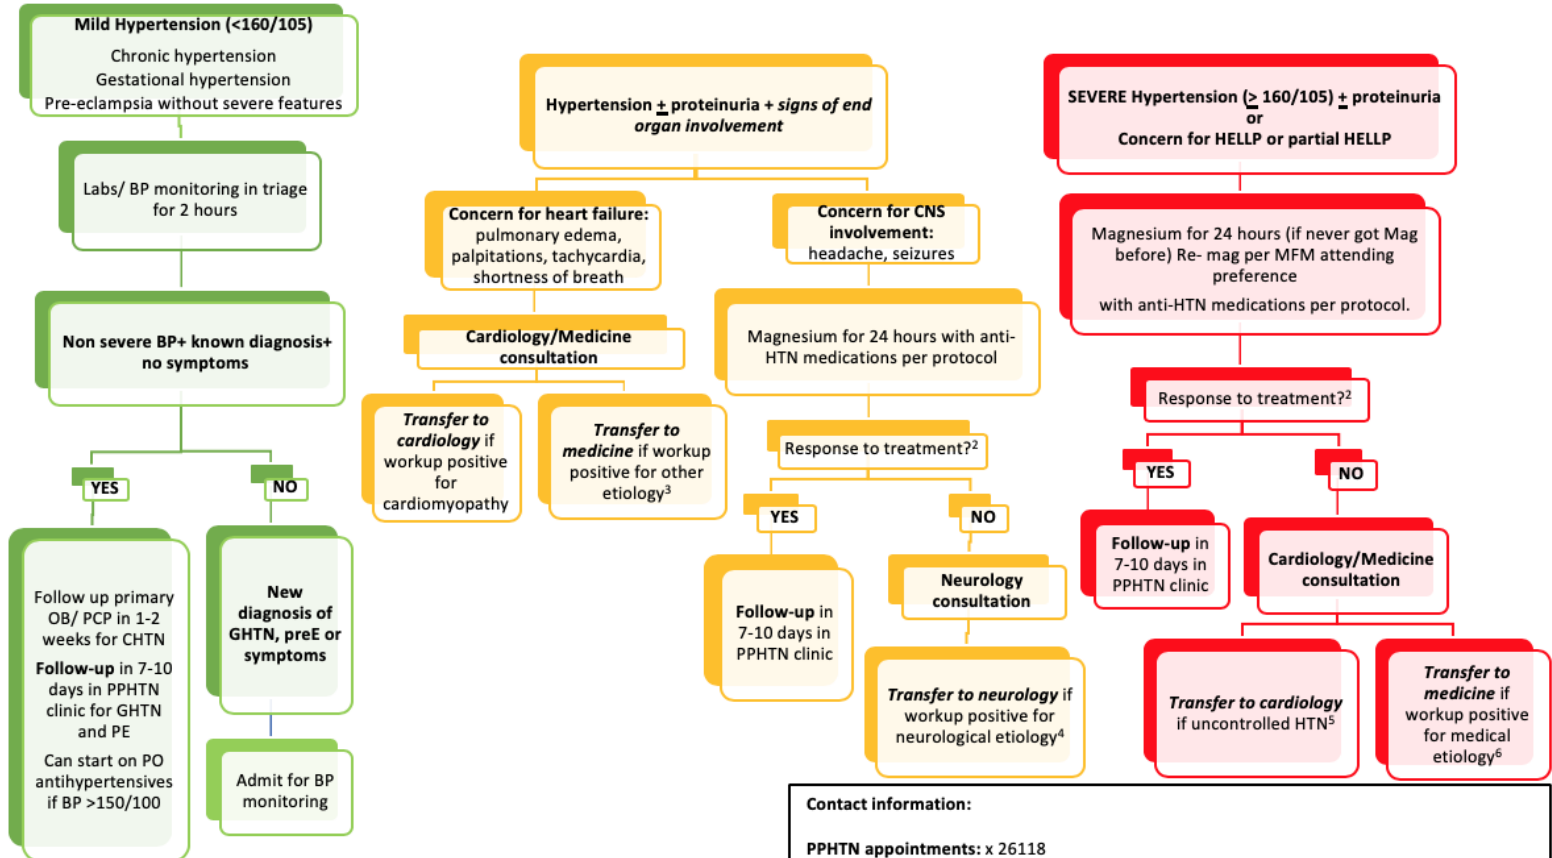

- Watch the preE video on the care network
- Give written preE instructions- tearpad sheet
- Give BP cuff
- Follow up in PPHTN clinic in 7-10 days

## READMISSIONS

### The PRICE study: Pre-eclampsia Readmission Inpatient Care Evaluation

Postpartum hypertension (>140/90) measured twice at least 4 hours apart, between delivery and six weeks postpartum

All patients should be admitted to MFM

<sup>1</sup>All patients admitted with post-hypertension should have at least 24 hours of BP monitoring, with exception being certain chronic hypertensives.

Treat BP if > 150/100 if persistent or 4 hours apart with PO antihypertensives

<sup>2</sup>Response to treatment should be defined by at least 12 hours of blood pressures <150/100 prior to discharge.

<sup>3</sup>Examples of etiologies that would be appropriate for **transfer to medicine**: thyrotoxicosis, pheochromocytoma arterial stenosis, adrenal tumors

<sup>4</sup>Examples of etiologies that would be appropriate for **transfer to neurology**: intracranial process, stroke, non-eclamptic seizures

<sup>5</sup>Examples of appropriate **transfer to cardiology**: inability to control blood pressures despite high doses of Procardia and Labetalol OR requiring IV anti-hypertensive drip

<sup>6</sup>Examples of appropriate **transfer to medicine**: if workup positive for HUS, TTP, exacerbation of lupus, acute fatty liver

#### Contact information:

PPHTN appointments: x 26118

Cardiology outpatient appointments: x 29461

Cardiology consult: x 3547

Dr. Tamar Polonsky pager: x 9189

#### ALL patients with GHTN or PreE

- Watch the preE video on the care network
- Give written preE instructions- tearpad sheet
- Give BP cuff
- Follow up in PPHTN clinic in 7-10 days

## Postpartum re-entry into the hospital with hypertension (>140/90)

Patient who are postpartum within six weeks of delivery and have HTN (>140/90)

Calls from **Home**

Comes to L&D triage

Comes from **ED**

**Pivot nurse:** patient with hypertension (>140/90) and post partum

AMS, clinical suspicion for heart failure or respiratory failure, active seizure?

Yes

Call OB resident STAT- 55142

No

Send to L&D triage

Comes from the **clinic**

BP  $\geq$  160/110, send to L/D

Call L/D resident to notify

Resident to notify charge

All other patients - if admission needed direct admit to MB or L/D ( whichever is available)

**Post Partum HTN Clinic**  
**Population: Preeclampsia, Superimposed Preeclampsia, and Gestational HTN**  
**Goal <140/90**

**SBP  $\geq 160$  and/or DBP  $\geq 110$  persistent for 15 minutes**

**Triage to L&D - 26639**  
**\*Follow PRICE**

**Alert MFM Attending**

**Follow up with pharmD or cardiology per hospital dispo**

**SBP 150-159 and/or DBP  $>100$  *without* alert symptoms**

**Increase dose by 30-50% and/or add labetalol or nifedipine XL**

**1 week follow up:  $<150/100$  then 6 week PP cardiology visit**

**Abnormalities? Alert MFM attending + If Admit  $>$  MFM**

**Regimen high doses of  $\geq 2$  agents? Page cardiology 9189**

**Order CMP, CBC w/ diff, P/C ratio**

**Follow up BP  $>150/100$ , w/ normal labs, titrate med(s)**

**SBP 140-150 & DBP 90-100**

**Follow up in 2 weeks**

**SBP  $>150$  or DBP  $>100$  then follow orange protocol**

**BP  $<150/100$  follow up 6 week PP with cardiology**

**SBP  $<140$  & DBP  $<90$**

**Taper regimen 30-50% but stop if  $<120/80$**

**Patient to call if SBP  $>150$  or DBP  $>100$**

**6 week PP cardiology appt 29461**

## Goals

- ✓ Improve knowledge among providers and patients
- ✓ Appropriate and timely management of HTN
- ✓ Reduced rates HTN related complications
- ✓ Improve rates of PP follow up
- ✓ Appropriate management of readmissions for HTN
- ✓ Improve long term BP control
- ✓ Follow up with cardiology

## Sustainability/ Future

- Nurses involvement
- Education of all care providers and competency training (world preeclampsia day, facebook live, webinars)
- Data collection to show quality improvement

## TEAMWORK

# Results

N= 495 patients  
80% were African-American  
68% had Medicaid  
Median age was 28 years

- Median [IQR] systolic BPs immediately post-delivery were higher in the beginning of the study period as compared to the end (152 [139,161] vs 139 [133,150];  $p=0.0001$ ).
- A significant increase in PP antihypertensive use was also observed (34.2% vs 45.6%,  $p=0.04$ ).
- Assess engagement with healthcare at 6 weeks and 1 year

First Trimester

**Ask About Aspirin**  
It may delay or prevent the onset of preeclampsia

**If you have any of these risk factors**

- History of preeclampsia
- Pregnant with more than one baby
- High blood pressure
- Diabetes
- Kidney disease
- Autoimmune disorders

**Talk to your care provider about taking prenatal aspirin**

**Start taking 81mg aspirin between 12-16 weeks of your pregnancy daily at bedtime**

Treatment with low-dose aspirin should not decrease regular monitoring and response by a certified care provider. If you experience signs or symptoms of preeclampsia, notify your care provider immediately.

**PREECLAMPSIA foundation**  
To learn more, visit [preeclampsia.org/aspirin](http://preeclampsia.org/aspirin)

© 2018 Preeclampsia Foundation Updated 11/2018

After 20 weeks

**Ask Your Doctor or Midwife**

# Preeclampsia

**What Is It?**  
Preeclampsia is a serious disease related to high blood pressure. It can happen to any pregnant woman during the second half of her pregnancy, or up to 6 weeks after delivery.

**Risks to You**

- Seizures
- Stroke
- Organ damage
- Death

**Risks to Your Baby**

- Premature birth
- Death

**Signs of Preeclampsia**

- Stomach pain
- Headaches
- Feeling nauseous; throwing up
- Seeing spots
- Swelling in your hands and face
- Gaining more than 5 pounds (2.3 kg) in a week

**What Should You Do?**  
Call your doctor or midwife right away. Finding preeclampsia early is important for you and your baby.

**For more information go to [www.preeclampsia.org](http://www.preeclampsia.org)**

Postpartum

# Education to patients

# WHERE TO BEGIN.....

- Create a team with diverse members (OB physicians, nurses, anesthesiologist, pharmacist, managers)
- Compare your hospital with the bundle elements
  - Gap analysis
  - Focus on areas that may be easiest to implement (get an easy win)
  - Identify potential barriers and honestly address them
- Communication, Response & Reliable Processes
  - High risk huddles and debriefing
- Simple debrief
  - Timely and easy to do
  - Should provoke awareness and ideas
  - Identifies problem areas, confirms best practices
  - Plan for follow-up and reporting back to staff
- Post the process- pocket note book, bulletin boards, posters, food/networking
